

## Introduction

We, as a group of three, are looking forward to contribute to the society around us, that is, our fellow beings can benefit seamlessly by the step we are taking towards the betterment of the society by the means of our project which revolves around the medical facilities available around the needy.

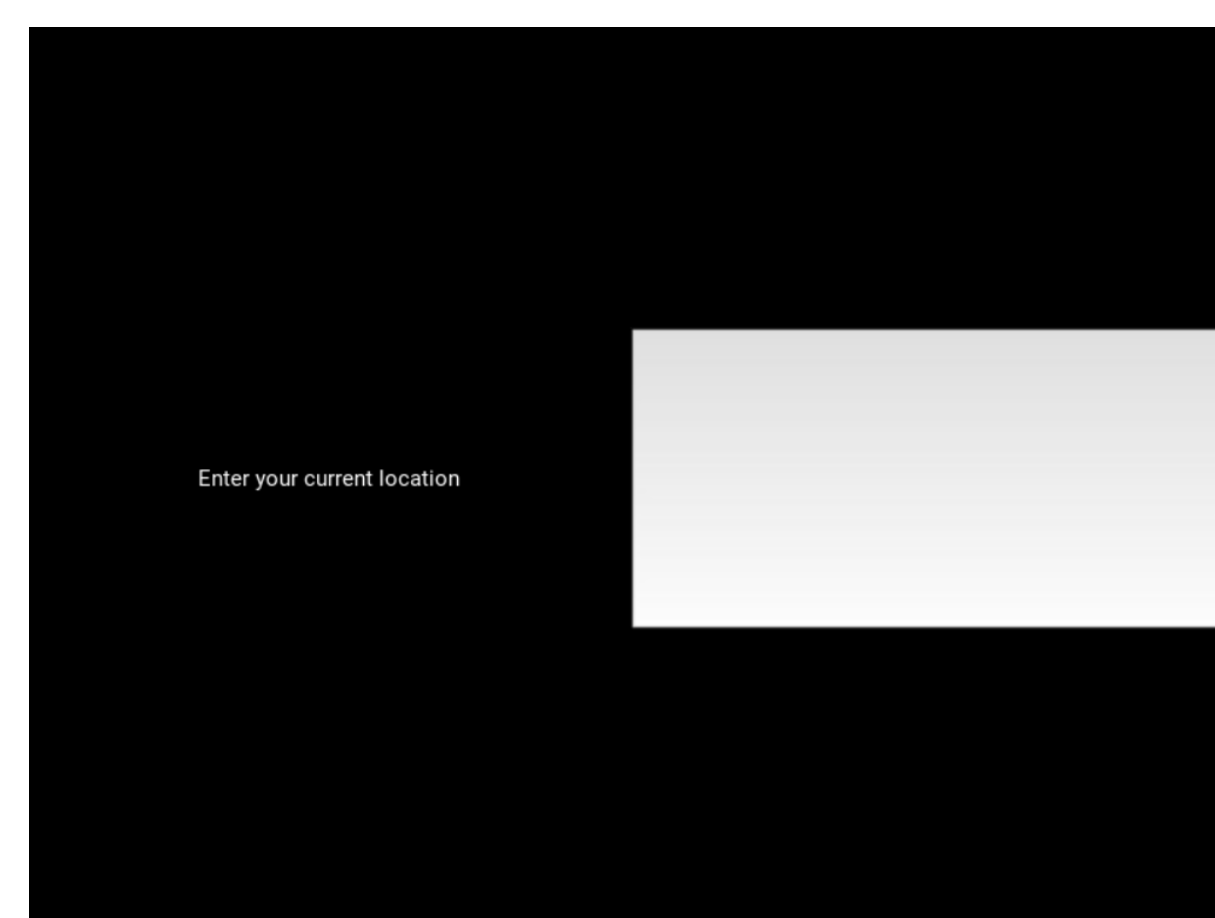

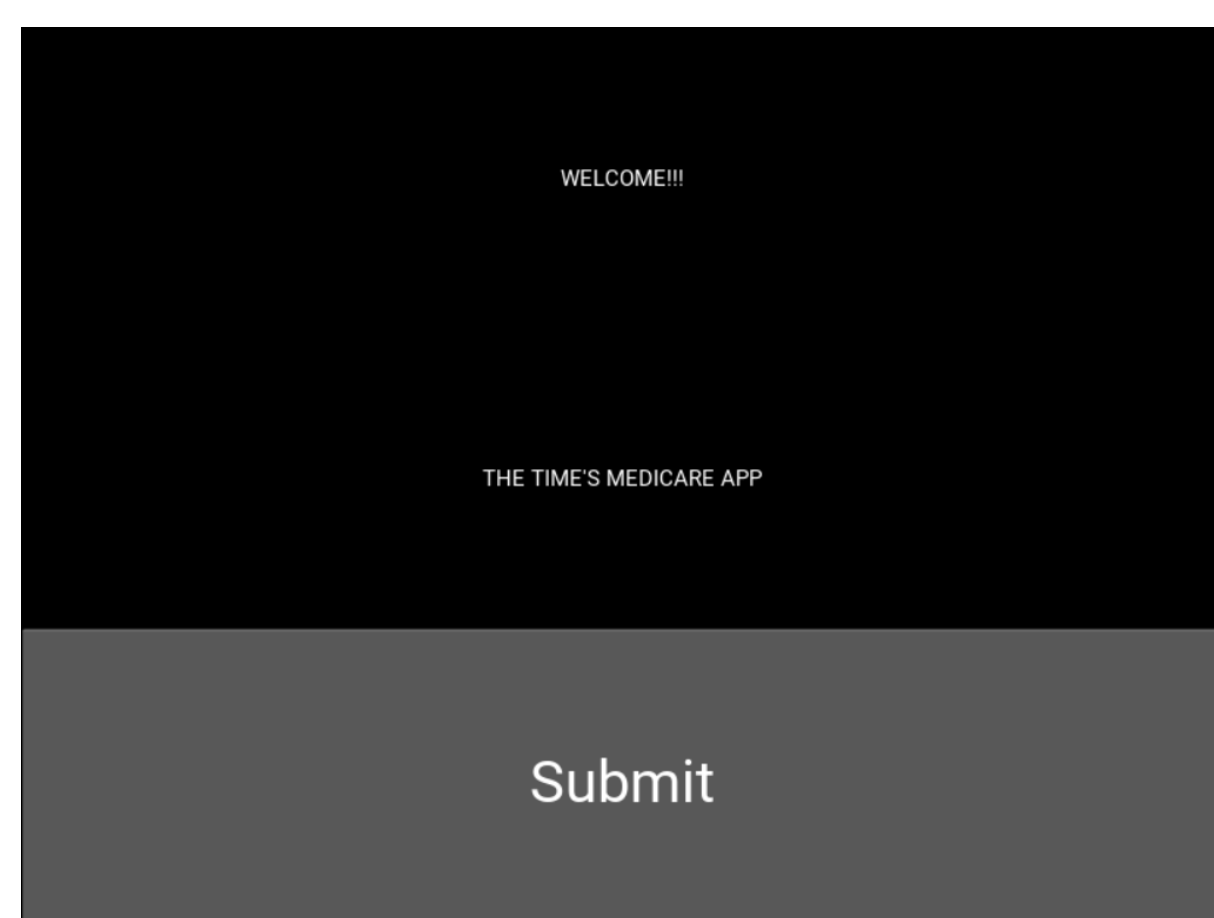

## Techniques Utilized

## Problem

Suppose an unfortunate accident happens around some corner of the world. The patient maybe unaware of the local medical facilities available near him. So it is difficult for the patient to get to the proper place at the right time. Moreover, there is currently no software which helps the needy the way our app will do it!

## User Interface/Demo Snapshots

## Solution

So, we decided to develop an app which not only aware the needy about the nearby available medical facilities but also helps him/her to get the information about the facility. We are also thinking to add navigation to it in near future.

We think that we can create this app in the given time span as we are considering “Practo” app as our goal and taking this into consideration. We think we can create this app.

# THE TIMES MEDICARE

## Conclusion

This project helps the needy at the time when even a few micro seconds matter , where the patient is fighting between life and death. Our app will prove to be a boon for the current and the newer generations to come’.

## Future Work

In the future updates, we will be adding a navigation system and an emergency button.
